1. Applicant's election with traverse of the Group I, claims 1-4 in the response filed 2-20-2004 is acknowledged. The traversal is on the ground(s) that a search and examination of all the claims would not be a serious burden. This is not found persuasive because a wire pretensioning fixture claimed in the group II claims does not have to be used in a concrete casting method as claimed in the group I claims.

The requirement is still deemed proper and is therefore made FINAL.

- 2. Action on the merits of claims 1-4 follows:**
- 3. Claims 1-4 are free of the prior art.**
- 4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.**

Authorization for this examiner's amendment was given in a telephone interview with Mr. McKee on March 24, 2004.

The application has been amended as follows:

In the Claims:

Cancel claims 5-13. Applicant reserves the right to file for a Divisional Application.

5. The following is an examiner's statement of reasons for allowance: The invention relates to a method of casting elongated prestressed concrete products comprising the steps of: positioning a clam shell mold form including two hinged mold halves onto a first prestressing element, pretensioning fixture; closing the mold halves together over a set of prestressing elements pretensioned in the pretension fixture to form a mold cavity with the prestressing elements extending there along; dispensing concrete slurry into the mold cavity; permitting the concrete slurry to cure forming a casting; opening the mold halves and removing the mold form from the casting and the pretensioning fixture after the casting has partially cured; the casting remaining on the pretensioning fixture and the pretensioning fixture remaining stationery during the removal step of the mold form; permitting the casting to continue to cure on the pretensioning fixture after removal of the mold form at least to a point that engagement of

the concrete with the pretensioned prestressing elements will prevent movement of the prestressing elements within the concrete and thereafter releasing the prestressing elements from the pretensioning fixture, the method as claimed has not been taught either singularly or in combination by the prior art.

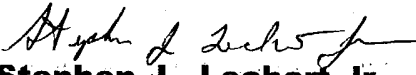

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Lechert Jr. whose telephone number is 571-272-1203. The examiner can normally be reached on 9:30-6:00.
